Assignment

Please go through the provided Jupyter Notebook tutorials and actively run the code to understand how the models work. Focus on experimenting, observing outputs, and making sense of the key ideas rather than just reading passively.

For the autoencoders section, there are two notebooks available, completing one is sufficient, but you are encouraged to explore both for a deeper understanding.

One of these will be enough:

`generative_ai_text_autoencoders_vaes_gans_transformers_tutorial.ipynb`

`generative_ai_autoencoders_vaes_gans_tutorial.ipynb`

And the other two you need to cover as well:

`llm_from_scratch_a_small_tutorial.ipynb`

`prompt_engineering_local_llms_tutorial_widgets.ipynb`

Work in your groups to prepare a short report that includes:

- A brief summary of what you explored
- Selected screenshots from your experiments (e.g., outputs, visualizations, results)

- Your reflections: key insights, “aha” moments, challenges, and any second thoughts or questions that arose

The main goal of this assignment is to reflect on your learning process and share your understanding with others.

The deadline has passed. You can still submit your answer, but it will be marked as submitted too late.
